

THE FORMULA FOR INNOVATION

SELECT CHEMISTRY

INNOVATIVE CHEMISTRY MANUFACTURED AND DELIVERED

As pioneers in chemical technology for over 40 years, we excel in developing, manufacturing, and distributing our customized products to enhance fluid and production performance in the energy industry.

Select Chemistry is a leading manufacturer and supplier of friction reducers and other specialty chemistry to the oil and gas industry. We understand the critical role that efficient and reliable completion fluids play in maximizing production and minimizing downtime.

Our Products Include

- Acids and Acid Additives
- Alcohols
- Antisludge Additives
- Asphaltene / Paraffin Systems
- Biocides
- Breakers
- Buffers
- Cement Spacers
- Cement Washes
- Clay Stabilizers & KCL Substitutes
- Corrosion Inhibitors
- Crosslinkers
- Fluid Loss Additives
- Foamers & Defoamers
- Friction Reducers
- Gas Enhancement Solutions
- Gas Migration Additives
- Guar & Cellulose Polymers
- Iron Control Agents
- Iron Sulfide Removal
- Mutual & Micellar Additives
- Nonemulsifiers
- Polymer Slurries
- Scale Dissolvers / Converters
- Scale Inhibitors
- Surfactants

Better Chemistry. Better Performance.

With over 5,000 square feet of lab space in Houston, Texas, our lab teams are expertly equipped to analyze the performance of your chemical program from beginning to end.

Research and development teams identify issues starting downhole, all the way to the tank battery to achieve long-term cost savings on your chemical program. Our water and fluid labs use historical data combined with advanced instrumentation and machine learning to provide valuable solution-driven operations.

Field Services

Our on-site services as well as in-house technical teams help improve ease-of-use for each product we deliver. Expertise in job site safety, chemical disclosure reporting, and post-job analysis are just a few reasons our customers choose Select Chemistry.

Sustainable Chemistry

Developing sustainable chemistry is crucial to minimize the environmental impact of industrial processes. By adopting sustainable chemistry practices, we are able to reduce waste, increase efficiency, and decrease our carbon footprint.

We are experts in produced water chemistry and treatment with formulations used at recycling facilities across multiple basins. Our products and analysis were key to recycling over **17 billion gallons** of produced water last year at Select operated facilities.

Recent Innovations

fluidmatch

Innovative solutions matched to the chemistry of your fluid and formation.

HYRC

Optimized completion chemistry to improve hydrocarbon recovery.

1515 West Sam Houston Parkway, Suite 100
